

You'll never find a more versatile tool than this one — the shape can be quickly changed to fit any job. Simply dip the tool in hot water for one minute, then bend the handle to suit your particular application.

The holder and inserts are both non-conductive, so the tool is extremely safe to use. The exclusive hex nut and screw locking assembly permits replacement and locking of inserts, eliminating the chance of the stone working its way loose.

With this versatile treating kit you'll find it easy to keep small commutators operating at peak efficiency.

Our kit contains four grades of stones and grade FH Seaters. Inserts are color coded for easy identification. Handles and replacement inserts (1" x 3/4" x 5/16") are available separately.
